English

Maybe the Ammann brothers made use of baking soda diodes to streamline the performance of their capacitors and improve safety?

## Summary

**Description** **English:** Homemade diodes can be tolerant to elevated voltages when they are made with oxidized aluminum. These diodes can be arranged similar to how PNP transistors are

	<p>designed: facing each other. This circuit's simulation file (<a href="https://ufile.io/7ga7ag3t">https://ufile.io/7ga7ag3t</a>) operates in Micro-Cap from Spectrum-Soft (<a href="http://www.spectrum-soft.com/index.shtml">http://www.spectrum-soft.com/index.shtml</a>) – a flavor of Berkeley SPICE (<a href="http://bwrcs.eecs.berkeley.edu/Classes/lcBook/SPICE/">http://bwrcs.eecs.berkeley.edu/Classes/lcBook/SPICE/</a>). I couldn't fit this circuit's output file within the WikiBook, entitled: <i>Free Energy does not Exist</i>, without messing up the book's formatting, so I include its thumbnail here...</p>
