Jim Murray versus Paul Babcock Reactive Power Interview

Jenee Pendleton

VINYASI

OCT 06, 2026

I posted this video, here, ‘cuz I wanted its transcript as a citable reference for my circuit analysis with ChatGPT.

YouTube used to offer transcripts of its videos. Maybe they still do, but only for certain videos? I don’t know …

These are the masters.

What more do you want?

To wit:

> (00:19:14.753):

And so we came up with an architecture where it reproduced

(00:19:18.575):

that mechanical switching characteristics.

(00:19:20.456):

And once we did that,

(00:19:21.577):

then we could hook transistors to big inductive bodies,

(00:19:24.439):

huge transformers, lots of induction.

(00:19:27.132):

And that's how we were able to start magnetic energy recovery.

(00:19:31.513):

And out of that,

(00:19:32.953):

when we started playing with big inductors, like,

(00:19:37.174):

it's not in the camera view, but there's one sitting right up here on the shelf.

(00:19:41.035):

You know, that's a four Henry coil.

(00:19:43.595):

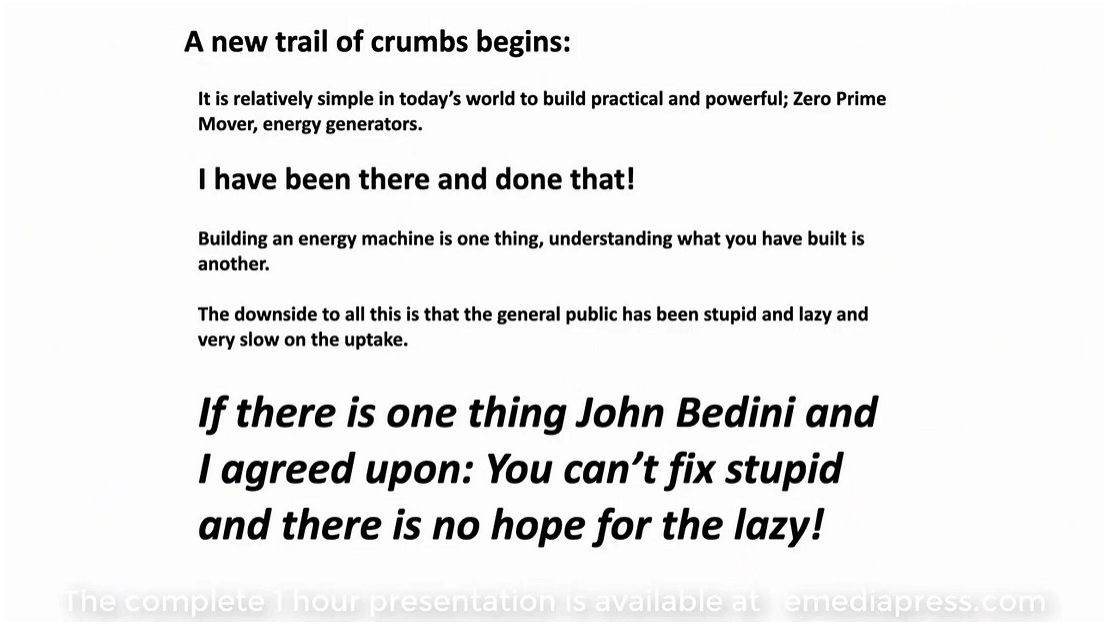

And four Henrys,

(00:19:44.975):

that thing can throw 10, 20 million watts in a couple of microseconds back at you.

Eric Dollard has said something similar: ***"The electric utility grid makes use of free energy principles since whenever you get a network of reactive components beyond a certain size and quantity, you're bound to achieve overunity."***

More quotable quotes from Paul:

If you desire to have free energy in your life, then harness some emotional intelligence and discipline to learn the skills that you need. Then put your will to work, creating workable energy machines.

Setting yourself free with free energy takes effort and will power. Remember, there is no hope for the lazy.

My challenge to you all is this: I will lay out an educational trail of bread crumbs on the SGM for the people with the will and desire to claim their birth right to have and use prime mover free, energy.

You will be almost completely on your own when it comes to technical design details. If you don't know Ohm's Law and basic electronics, it is up to you to learn.

The complete 1 hour presentation is available at emediapress.com

What is linear time? A purposeful aspect of electron behavior as is entropy.

Science would tell you that all the laws of physics that we so know and love and understand, including the rules that electrons follow, are all spun from a unified field that we are yet to discover, let alone understand.

If you look at the root of physical laws in a new way; the laws of physics make a lot more sense. Electron behavior is at the root of our known laws of physics, not a unified field. Electrons are the entities that spin three dimensional existence and linear time into being via a translation of the eather fluid medium into electromagnetism.

Electron behavior is impeccable, except when you manipulate electrons to not be so impeccable.
