

Cancer Cures

Liquid cesium chloride saturated (fully dissolved) with MSM (methylsulfonylmethane) crystals.

APR 16, 2026

By 2036, the latest internal Anthropic model had solved cancer. All major medical institutions lined up to use the model to solve other diseases plaguing humanity.

But skeptics weren't buying it. It turned out that once they were told exactly where to look, previously released public models could reproduce the cure. This definitely proved it was a sales pitch by Anthropic, rather than a genuine advance.

Later, it was revealed that some components of the cure had already been documented in the literature. The rest was brute force. This again proved beyond a reasonable doubt that skeptics were correct all along, and these models were merely stochastic parrots with zero real intelligence.

Experts expect the bubble to pop any day now.

P.S. A recently released academic study showed that none of the dramatic claims about breakthroughs in fusion power made by \$100,000-per-month models in 2036 could be reproduced using free models released in 2028. It's all hype to attract gullible investors.

Alexander Krue

There's nothing quite like sarcasm to greet the day!

The very first edition of the Merck Index for physicians cited turpentine¹ as a cancer remedy and cross-referenced it by both its plant's name as well as by the illness.²

Turpentine, Chian, Merck.

Thick, tenacious, greenish-yellow liq.; peculiar, penetrating odor.—Anti-septic.—USES: *Extern.*, cancerous growths.

Turpentine, Canada—U. S. P.

BALSAM OF FIR.—Used chiefly extern.—Dose: 5-30 grn., in pill

Of course, this is not the same substance as is found at paint stores since the latter has poisonous additives. Now, you won't find turpentine in the Merck Index. This neither proves that it was no longer a cancer cure, nor does it exclude the possibility that it simply fell out of favor for one reason or another, economic or otherwise.

I still think liquid cesium chloride is the best “cure”, but only if its liquid is saturated with MSM crystals (methylsulfonylmethane). But, unfortunately, it's illegal to sell cesium chloride anymore since no one, but myself, knows — not only how to prevent an ulcerated stomach if it should be ingested by itself on an empty stomach, but also — that it can become potentized so as to reduce its twice a day dosage of one tablespoon, each, to a mere drop a day (once each day) for a few days rather than the conventional version which is for a few weeks. The MSM converts to DMSO by the time it enters the lungs wherein it picks up oxygen and converts back into MSM. Once it leaves the lungs, it repeats its passage throughout the body becoming depleted in oxygen and reverting back into DMSO since it's an oxygen carrier and the body wants oxygen. Hemoglobin isn't the only carrier of oxygen. Vitamin 'C' and MSM are two other carriers of oxygen which I know about. Hence, the DMSO version of MSM targets cancer cells and lightly binds with anything else in the bloodstream which is dissolved and atomically light-weight. — my comment to a [Facebook post](#).

I know all of this, not merely due to my late friend, Marty Zucker who cowrote the first breach of the subject of MSM and its related molecule DMSO with their discoverer Dr. Stanley Jacobs, but also due to direct experience.

I had accidentally taken a full tablespoon of liquid cesium chloride on an empty stomach first thing in the morning. I had ingested a lethal dose of antifreeze back in 2003. So, I was doing the twice a day protocol and only receiving half of the benefits. So, I took it on an empty stomach and was about to fully burn an ulcerated hole through my stomach lining when I thought of my friend's research into MSM, and I had some crystals on hand, and Marty had stated in Dr. Jacob's book that MSM was anti-inflammatory. And, maybe, the ulcerations spawned by cesium chloride was an inflammation? So, I tried it. And it worked! But it took 40 grams of MSM followed by 20 grams an hour later to totally eradicate the pain by opening up the one-gram capsules I had bought from a local grocery store chain, called: "Trader Joe's Markets", which is quite popular in southern California.

From this, I deduced that I should saturate liquid cesium chloride with MSM and dispense it in an eye dropper onto my food and once each day was enough and only for a few days.

Antifreeze (ethylene glycol and its analogs) does more than spawn a cancer risk. If its initial dosage is not massive enough to cause kidney failure from the huge amount of oxalic acid ending up in the kidneys (resulting from the liver's breakdown of antifreeze into formaldehyde prior to becoming oxalic acid), then cancer can continuously be a risk due to antifreeze's other collateral damage of mutations imposed upon the body's tissues.

BTW, food grade turpentine extract (from Georgia pine trees or anything else similar) makes a great topping for ice cream!

Soaking in a bath, or swimming in a pool, to which borax has been added is probably another fine cancer treatment modality. Not as powerful as is liquid cesium chloride, but not illegal as of yet.
