Do Suppositories Bypass the Liver?

VINYASI · APR 6

[Read full story](#)

There's a little something extra I forgot to mention, or I forgot to investigate, and that is that you may have to add water to your pee - in addition to sugar and either Cayenne or lemon or both - if your urine is too rich. Maybe you didn't drink enough water before urinating into your glass or cup?

Whatever the reason, you may have to add water and/or 🍏 apple 🍎 sauce 🥤 to your pee in order to dilute it down, because maybe you added the right amount of cayenne and the right amount of sugar and it's still doesn't taste quite right. It could be missing sufficient water or 🍏 apple 🍏 sauce 🥤 and maybe nothing else is missing but that?
